

Experiences in Health Equity from the National Public Health Institute in Mexico (INSP)

Dr. Juan Rivera Dommarco
Director General

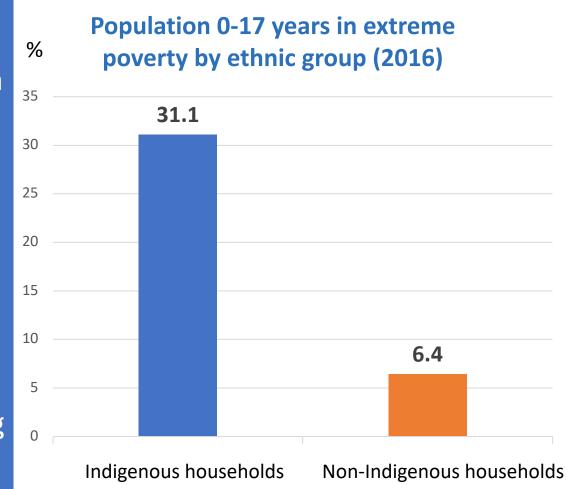

INSP Institutional Program on Health Equity with a focus on Indigenous population

DECEMBER 1-3, 2021 | VIRTUAL

An Institutional Program on health equity focusing on Indigenous population

- INSP's mission: "To contribute to social equity and the full realization of the right to health protection... through research, postgraduate training in public health and advice to Government
- Equity in health refers to the creation of equal opportunities to achieve a healthy life
- individuals and social groups are not placed on an equal footing to exercise their rights in the same way
- It is necessary to identify these inequalities, which are structural and determined by mechanisms that cause them to be systematically reproduced
- INSP developed an Institutional Program on Equity
- Contribute to equity in health through research, training and service

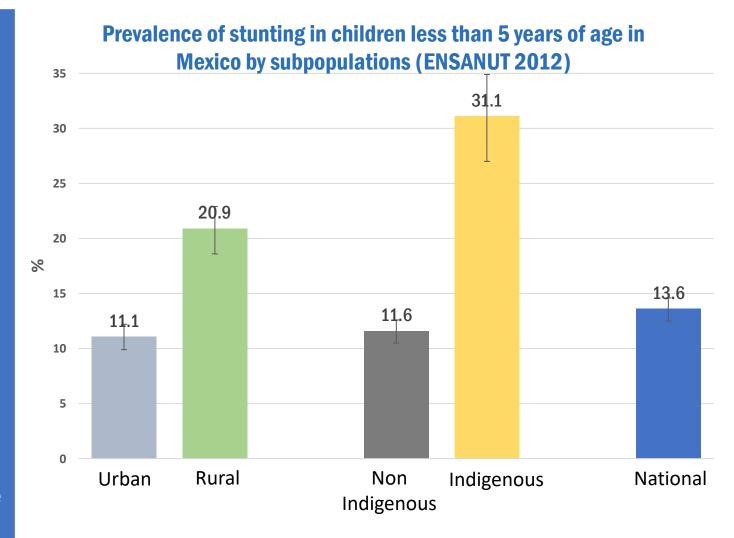

IANPHI

ANNUAL MEETING

DECEMBER 1-3, 2021 | VIRTUAL

- Recognize the structural determination of inequalities and their unjust nature, historically sustained in forms of discrimination and violence towards different sectors of the population, such as women, indigenous people, foreigners, the poor, etc.
- Recognize that social inequalities are not immutable, but that it is possible to transform and prevent them through collective action and public policies.
- Adopt a human rights and social justice perspective as a frame of reference to guide research, action and decision making

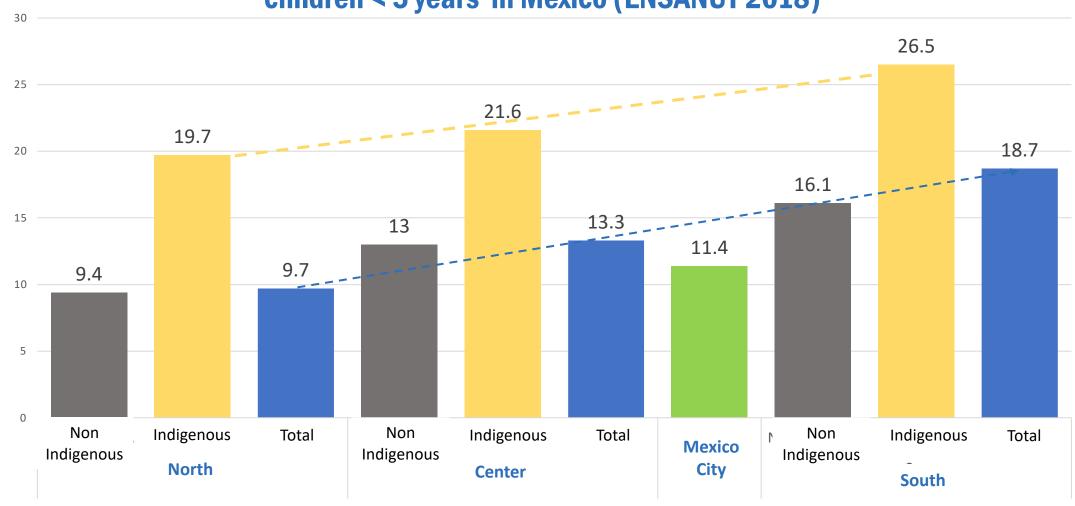

< -2Z height for age z score (WHO 2006)

DECEMBER 1-3, 2021 | VIRTUAL

Interaction of region and ethnicity in the prevalence of stunting in children < 5 years in Mexico (ENSANUT 2018)

DECEMBER 1-3, 2021 | VIRTUAL

Factors associated with having antibodies to SARS-CoV-2 in Mexico (Serum samples from ENSANUT-2020 during the Pandemic)

Relative to those who live in Rural Areas:

- 34% higher in urban
- 46% higher in Metropolitan Areas

Relative to those who have a university degree:

- 30% higher in primary school
- 32% higher in secondary school
- 23% higher in high school

Relative to those in the highest income tertile:

 20% greater in the lower income tertile

Basto-Abreu A, Carnalla M, Torres-Ibarra L, Romero-Martínez M., Martinez-Barnetche J., Shamah-Levy T. et al. SARS-CoV-2 antibody prevalence in Mexico: results from a national representative survey from August to November 2020.[in review]
