

***Promoting healthier populations  
Achieving universal health coverage,  
Addressing health emergencies***

- a) What capacity/experience do NPHIs have to address this issue*
- b) How might NPHI collaborate to learn from each other & build capacity*
- c) How can WHO and IANPHI best complement each other to support NPHIs to address this issue – Building on IANPHI's tools for knowledge production, sharing expertise and technical cooperation*

1. Data, monitoring & surveillance – to give a clear state of health
2. Logical pathways & interdependencies to achieve better health
3. Infrastructure for public health
4. Public health workforce and primary health care
5. Better coordination of partners
6. Advocacy

Key takeaway: NPHIs are a core function of health systems and bridge the gaps between UHC, health promotion and health emergencies.

## ***Addressing Health Emergencies***

1. Varied IANPHI network all working in the interests of public health
2. IANPHI should map attributes and experiences of NPHIs
3. Institutional development and soft-skills can sustainably develop capacity to address health emergencies
4. Workforce development has impacts accross WHO priorities
5. IANPHI can have an added value in South-South cooperation
6. Complementarity with WHO for what IANPHI can provide

Key takeaway: IANPHI has great potential to gradually scale up and facilitate further exchanges.
