Collaboration with Community Readiness & Resilience: The Rationale

Collaboration with Community Readiness & Resilience: The Rationale

Surveillance and Early Warning Systems	• Enhancing local data collection and analysis • Work closely with local health authorities
Preparedness and Response	• Build local capacity to handle emergencies • Develop community-based disaster response plans
1.Policy Development and Advocacy	• Collaborate more directly with community leaders • Provide resources for community engagement

ROBERT KOCH INSTITUT

Collaboration with Community Readiness & Resilience: Practical Examples 2024

ROBERT KOCH INSTITUT

Strengthening community protection: community-centred preparedness, response and resilience for public health emergencies

Public health emergencies becoming more complex

Engage community groups and integrate them within formal health systems

Integrate community-led preparedness into national policies

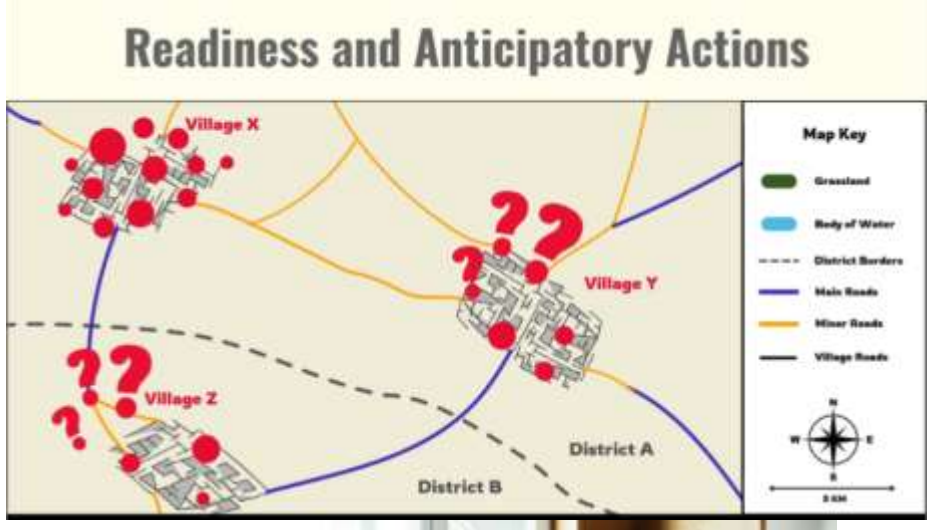
Empowering communities to participate in decision-making

Interventions must respect local contexts

Establish a <u>global partnership</u> to support these priorities

Community Protection Strategy National Workshop, Jordan, November 2024

- Collaboration on the planning and preparation of the workshop
- Technichal support in the adaptation and contextualization of the table top exercise
- Support the implementation procces, e.g. facilitation and evaluation



Consider how you would work with village leaders and other community members to address the rumours and misinformation.

Design the following products to convey your key public safety messages at this stage of events:

- 1 social media post
- 1 wall poster
- 1 radio broa

GOARN Community–Centered Approach

GOARN Strategic Theme 1:

Applying a community-centered approach

A community-centred approach will focus on integrating community engagement as a broad-based foundational concept in all efforts and areas of work, including risk communications, by:

- 1a strengthening capacity by using operational research in the social and behavioural sciences to complement and be integrated into biomedical and epidemiological evidence;
- 1b using community engagement principles during outbreak response;
- 1c building capacities to support communities' capacities in public health and outbreak responses.

Community Readiness & Resilience
